

## DATA MANAGEMENT BOOKSHOP

The best data management books available are now on sale through DAMA Canberra. These books are not in Canberra bookshops and are available for sale for less than they can be purchased on Amazon

The books can be viewed at DAMA Canberra meetings and purchased via cash or bank transfer. .

The Guide the Data Management Body of Knowledge

**\$80**

Amazon \$AU104

Written by over 120 data management practitioners, the DAMA Guide to the Data Management Body of Knowledge (DAMA-DMBOK) is the most impressive compilation of data management principals and best practices, ever assembled. It provides data management and IT professionals, executives, knowledge workers, educators, and researchers with a framework to manage their data and mature their information infrastructure.

The DAMA-DMBOK is the reference book for Certified Data Management Practitioner (CDMP) Examinations and the source for many of the questions used in the examinations. For more information on CDMP go to [www.cdmpaustralia.info](http://www.cdmpaustralia.info).

The DAMA Dictionary of Data Management, 2nd Edition

**\$70**

The DAMA Dictionary of Data Management, 2nd Edition is a glossary of over 2,000 terms which provides a common data management vocabulary for IT and Business professionals and is a companion to the DAMA Data Management Body of Knowledge (DAMA-DMBOK).

Non-Invasive Data Governance

**\$40**

Non-Invasive Data Governance™ focuses on formalising existing accountability for the management of data and improving formal communications, protection, and quality efforts through effective stewarding of data resources. Non-Invasive Data Governance will provide you with a complete set of tools to help you deliver a successful data governance program.

## Data Model Scorecard

**\$45**

Data models are the main medium used to communicate data requirements from business to IT, and within IT from analysts, modellers, and architects, to database designers and developers. Therefore, it's essential to get the data model right. But how do you determine right? The Data Model Scorecard contains a data model quality scoring tool with ten categories, aimed at improving the quality of your organisation's data models. This book, written for people who build, use, or review data models, contains the Data Model Scorecard template and an explanation along with many examples of each of the ten Scorecard categories.

## Data Modeling Made Simple

**\$40**

This book will provide the business or IT professional with a practical working knowledge of data modelling concepts and best practices.

The topics covered in the book include:

1. Knowing when a data model is needed and which type of data model is most effective for each situation.
2. Reading a data model of any size and complexity with the same confidence as reading a book.
3. Build a fully normalised relational data model, and an easily navigable dimensional model.
4. Techniques to turn a logical data model into an efficient physical design.
5. Leverage several templates to make requirements gathering more efficient and accurate.

## Data Modelling for Business

**\$40**

The High-Level Data Model is a simplified view of a complex environment. It can be a powerful communication tool of the key concepts within our application development projects, business intelligence and master data management programs, and all enterprise and business initiatives.

This book contains best practices for implementing a high-level data model, along with some easy-to-use templates and guidelines for a step-by-step approach. Each step has illustrated examples from on actual projects to which the authors have contributed. Names have been changed to protect the innocent, but the pain points and lessons are preserved. One example spans an entire chapter and will allow you to practice building a high-level data model from beginning to end, and then compare your results to ours.
